

Bags under the eyes - the eternal problem

Bags under the eyes is nothing but the so-called. handbags acids, which are removed after incision of the lower lid eyelash line. By contrast, the problem of falling to the excess eyelid skin stretched, which removes the cut by 2-3 mm in the crook of the eyelids. Duration remove excess skin from the upper eyelids and lower amounts of fat with a little over 2 hours.

You wake from the anesthetic should not feel pain, but there is a feeling of gluing the eyelids. During the first 2 days eyelids and face , as well as swollen. Should take into account the fact that it can not be too hard to open eyes, with each blink can cause a feeling of drawing. At 3 days the patches are removed and the seams are barely visible. After the next 4 days are the stitches removed. Before surgery, you should:

- * To do research that will be ordered by a doctor;
- * Holiday schedule of 2-3 weeks;
- * Schedule treatment so that the do not have the time of menstruation;
- * Ask what cosmetics should be used to prepare the skin for surgery;
- * Ask what medications to use and where to stop;
- * Learn about the complications;
- * Describe everything that interferes with sight to the specialist he had a complete picture of the patient's expectations.

After surgery:

- * At least 2 weeks should wear dark glasses;
- * Not to do makeup;

Please note that individual subjects to the treatment has to be one hundred percent sure how to change subjects.
