

Breast augmentation, or as close as perfection

Plastic surgery gives rise to mixed feelings for many people this is a way to fulfill their dreams, whether its chosen goal is to enhance the beauty, while others consider it to be "opposition to the will of God", or a waste of money.

However, despite such a divided opinion doctors surgery attract all masses of the people who want to dream design. Surgery gives many women lucky dream look, the joy of life. Would you like to have a bust of the famous singer or actress? Just surgeon, scalpel, money ... and you're beautiful! But not everything is so beautiful and simple as it sounds. It was already a lot of cases where the operation is, or serious health problems. Often, instead of beautiful breasts are dreaming about what is pain, stress, disappointment. Of course, not always so. Many women dream after the operation has the appearance, which give them confidence and simply smile. However, in spite of everything always have to remember the precautions and be prepared for disappointment. Speaking about the methods or ways which performs the same treatment should be first of all mention of implantation. It is the surgical introduction of a foreign body organ . Most often placed under great pectoral muscle. The most commonly used prostheses that apply surgeons during operations that silicone breast or physiological saline. Currently there are about 15 types of shapes of these prostheses. They are safe substances to form a bag, inside which there is a solution of salt, or silicon, whose texture is similar to soft tissues. Previously used a woman's own fatty tissues, but abandoned them because they are often , or absorbed, it was necessary to remove them. The method of placing implants is extremely important. Is dependent, inter alia, the type of breast cancer.
